

GLYCOLIC ACID PEEL

- For the first 48 hours after your treatment, avoid touching your face. We have removed the outer, protective layer of skin, which makes your skin susceptible to irritation. Follow this skincare routine, **once in the morning and once at night:**

1. Wash the area with a gentle cleanser.
2. Apply CX5 Correction Cream.

- You may apply your usual cosmetics immediately after treatment.

- After 48 hours, you may resume using your active glycolic acids to the extent you can tolerate them.

- Avoid sun exposure, including sitting by a window or in the car with the sun on your face. If sun exposure is unavoidable, apply SPF 30 sunscreen every two hours.

- If you have questions or concerns, please call (207) 775-3446.
