Post Fraxel Treatment Instructions Fraxel Restore Dual

1. Immediately after the treatment, you will experience **redness, swelling** and sometimes **pinpoint bleeding**. **Heat sensation** can be intense for 2-3 hours following your treatment. Occasionally **oozing** may occur in isolated areas for a few days.
2. Over the next few days redness may worsen. Swelling may be significant and cause discomfort. You may notice **little dark spots** appearing on the treated area. These are dead skin as a result of the treatment, and should start **sloughing** off after 3-4 days post treatment. Most patients complete this process in 4-7 days. (Off face areas may take up to two weeks)
3. Once the sloughing is complete, you may notice some **pinkness** over the next few weeks.
4. Some patients experience **itching**.

What you can do:

1. Immediately after the treatment you should use an **Extra Rich Moisturizer**. If this is irritating or not moisturizing enough use a thin layer of **aquaphor**. Use the aquaphor to cover any areas that may ooze and keep moist. Use ice packs to decrease any heat sensation. You may cleanse your skin with Toleriane **Cleanser**.
